

# 2014 Harvest Performance Summary

Prepared By:  
Langfritz Seed Inc.

*The Right Products for Every Acre.*

November 12, 2014

Dear Valued Customer,

Farming is complex and this growing season proved that once again. With a challenging planting window and excess amounts of rain in June our crops struggled early. We faced weaker plant stands and nitrogen loss due to extremely saturated soil conditions. This, along with late season disease that moved in late (early August NCLB) resulted in more premature death of our corn crop than normal.

The soybeans didn't like the wet June conditions any better. With saturated soils, N fixation from nodulation was stalled due to anaerobic soil conditions resulting in some very short, stunted beans all season long. Fields with good drainage, natural or artificial had an advantage because of this. Every year Mother Nature throws us something different and 2014 was no exception.

**Again this year, Pioneer® brand AQUAmax hybrids are showing a HUGE YIELD ADVANTAGE OVER THE COMPETITION!** Along with the strength of our current lineup, **P0193AM, P0453AM, P0636AM/AMX, P0987AMX, P1151AM, P1142AMX, P1365AMX, P1498AM** several of the new products that we discussed in plot tours are doing very well...**P0157AM/AMX, P0297AMXT, P0506AM, P0969AM/AMXT, P1197AM and P1257AMXT.**

**Pioneer® brand soybeans -- "The #1 Choice" -- are looking great again this fall.** The industry-leading lineup of soybeans such as **92Y51, 92Y75** keeps getting stronger with the addition of our new "T" Series soybeans: **P22T69R, P22T41R2, P22T61R, P25T51R and P28T33R!**

I've enclosed some data from your area that might be helpful as you begin planning for 2015 planting. I'll be in touch with you soon to help you review this and other information.

In the meantime, I'd also encourage you to visit the DuPont Pioneer website at [www.pioneer.com](http://www.pioneer.com) for more product and performance information. Also visit [www.pioneer.com/yield](http://www.pioneer.com/yield) for local plot performance data.

Sincerely,

Langfritz Seed Inc.

NEW FOR 2015  
BROWN MID-RIB HYBRID  
LIMITED SUPPLY

©.TM,SM Trademarks and service marks of Pioneer Hi-Bred International, Inc. © 2012 PHIL.

Right Product. Right Acre.

#### P0193AM/AMX: Double and Triple version available

- One of our best rooted products over the past several years
- Establishes strong stands but keep off of cool, wet fields early in the season for best results as it doesn't like cool, saturated soils
- Excellent drought tolerance with more upright leaves
- Good candidate for fungicide especially in corn/corn environment

#### P0157AM/AMX: Double and Triple version available

- New 101 CRM hybrid showing strong yields in 2014; will make a great companion to P0193 genetics
- AQUAmax drought tolerance for placement on tougher, water limited soils
- Higher quality grain and improved TW when compared to P0193
- Good candidate for fungicide especially in corn/corn environment

#### P0297AMXT: Triple with dual mode of action for CRW (HXX + Agrisure RW)

- 102 day maturity with a 96 day silk. Very short plant stature with great roots.
- Strong drought tolerance but keep off sandy soil due to plant and ear heights.
- Spray with a fungicide and have ample nitrogen program to aid in stalk quality at harvest.

#### P0407AMXT: Triple with dual mode of action for CRW (HXX + Agrisure RW)

- Very fast out of the ground
- As heavy of TW corn as you will find in the Pioneer lineup for 2015
- Need to keep populations up (35,000 or more) to maximize yields due to fixed ear type
- Dual mode of action for rootworm control. Great product for long term history of corn on corn
- Good choice for fungicide in heavier GLS and NCLB fields

#### P0453AM: Double

- Has been a leader for Pioneer for many years.
- Early season roots are a watch out.
- Good leaf disease resistance package especially NCLB

#### P0506AM: Double

- New mid-season top yield hybrid to replace P0453AM moving forward
- Early season roots are a watch out so make sure to plant 2" or deeper to encourage strong rooting
- Very good leaf disease tolerance and staygreen in 2014
- Plant at a modest population (32-34,000) to maximize yields

### P0533AM1 Triple

- Short plant with low ear placement. While not a big root mass, the plant stature definitely gives it acceptable standability during the storms.
- Outstanding emergence and stand establishment. Upright leaves.
- Strong drought tolerance. 97 day silk provides a long grain fill period
- Keep a strong N program under its feet for max yield and stalk quality – along with a fung. application

### P0528AMX: Triple

- Defensive 105 day triple with tremendous root strength
- Solid drought tolerance that is suitable for all soil types
- Very heavy test weight with industry leading Goss' Wilt tolerance

### P0636AM/AMX: Double and Triple version available

- Great emergence on this product as well as roots and drought tolerance.
- Main watch out is Goss' Wilt and TW is a little lower compared to other products
- Fungicide application will help out on late season stalks
- Do not let this be your last hybrid you combine

### P0652AMX: Triple

- Very good emergence, roots, and drought tolerance.
- Shorter and better on Goss' Wilt than P0636, extremely high TW
- Moderate NCLB score so consider fungicide application to

### P0969AM/AMXT: Double and Triple version available (HXX + Agrisure RW)

- Exciting new 109 CRM hybrid available in multiple trait options
- Excellent standability and late season intactness
- Early flowering for its maturity which allows it to move north all the way to MN border.
- Strong drought tolerance also but keep on your best ground to benefit from its great yield potential

### P0987AMX: Triple

- Excellent stand establishment and vigor in 2014
- Multipurpose hybrid for silage/grain with good digestibility.
- Wide leaf pattern to help capture sunlight. Shorter plant height and excellent against Goss' Wilt.
- Responds well to higher planting populations

### P1151AM: Double

- Very good roots and late season stalks.
- Had another knockout year for yields. This should be part of everyone's corn package
- Keep off corn on corn acres that are poorly drained.
- One of our best drought tolerant products. 106 day silk allows this product to move north nicely.
- 

### P1197AM: Double

- New yield leader hybrid with outstanding performance in 2014
- Best staygreen in our lineup and strong stalks allowing for late harvest option
- Will be an awesome 1-2 punch with P1151AM on rotated acres; will be later physiology than P1151AM
- Great emergence allowing for early planting option

### P1142AMX: Triple

- Leader 111 CRM triple with very strong roots and stalks
- Moderate GLS and NCLB scores: it would benefit from a fungicide application
- Keep on higher water holding capacity fields to maximize yields

### P1221AMXT: Triple with dual mode of action for CRW (HXX + Agrisure RW)

- Workhorse full season triple with dual mode of CRW control
- Replaces P1215AM1 with better roots and improved drydown
- Very good roots, stalks, and disease package
- Needs heat to achieve top yields; performed great in 2012 and 2013

### P1257AMXT: Triple with dual mode of action for CRW (HXX + Agrisure RW)

- Excellent yield potential in this new, exciting 112 CRM triple
- Strong stalks and staygreen late in the fall allowing for late harvest option
- Position on you higher yielding, higher water holding capacity soils to achieve greatest results

### P1365AMX: Triple

- Leader 113 CRM Triple with top end yields that has outstanding disease tolerance and plant health
- Excellent rooting product with strong stalks late into the fall
- A great hybrid that is extremely agronomic and low maintenance
- Keep off of cool, wet soils for best emergence

### P1498AM: Double

- Clear yield leader at this CRM of 114 with strong drought tolerance and stalks
- Keep on good fertility soils and higher management farms
- Average roots would be the watch out on this hybrid
- Solid choice for PBY if you don't mind late season corn

Comments: P0157AM had some missing plants from sprayer tracks P0297AM1 was not checked next to the plot it was planted in the rest of the field.

This farm has very little tile, does have some slope. Respectable yields for the ground it was planted on.

Right Product. Right Acre.

#### P22T69R:

- Widely adapted across Northern Iowa and brings industry leading yield potential
- Very good FEC, WM, and SDS
- **Peking SCN source** for fields that have been using PI88788 for a while when planted to soybeans
- Wider canopy vs. 92Y51 with excellent harvest standability
- Maturity acts closer to 2.0 in most fields with very solid agronomics
- Will work well on variable soil types

#### P22T41R2:

- Very good WM tolerance with similar plant height and canopy width as 92Y74's
- Excellent BSR and can tolerate high pH soils
- Nice companion to P22T69R
- **Peking SCN source** for fields that have been using PI88788 for a while when planted to soybeans

#### P22T61R:

- Top end yield potential in early Group 2 maturity
- Keep on your best soil to maximize yields; use P22T69 or P22T41R2 on your tougher acres
- Will act as the earliest of all our 2.2 maturity offerings, maturing more like a 2.0

#### P24T19R:

- Wider canopy and shorter variety vs. 92Y51 or P25T51R
- Will work well in wide row spacing
- Very strong on FEC and phytophthora so it will work well on high pH and poorly drained soils
- Excellent choice for early planting when soils can be cool and a bit wet

#### P25T51R:

- New yield level in this maturity
- More offensive option compared to P24T19R and 92Y51
- Contains 1C and 3A phytophthora resistance genes which should perform well in wet soils in spring
- Avoid fields prone to heavy infestations of white mold
- For best results place on fields with history of lower disease pressure or fields coming out of C/C rotation

#### 92Y51:

- Exceptional in white mold environments and field emergence
- One of our best soybeans along with P28T33's for sudden death tolerance
- Tall plant with very slender canopy width makes it a good fit in narrow rows
- Well suited for a wide range of soils with good harvest standability

#### 92Y74:

- Industry Leading White Mold tolerance with a shorter stature
- Not as strong on SDS as 92Y75 or P28T33R so keep off of fields with a heavy SDS past
- Easy threshing variety with great harvest standability

#### 92Y75:

- One of the top yielding soybeans for the past 3 years.
- Industry leading BSR tolerance
- Taller plant height that works well in all row spacing
- Not as strong as 92Y74 on White Mold but still a great choice on light to moderate WM pressure fields

#### P28T33R:

- New yield level full season soybean that is widely adaptive of large geographic area
- One of our best soybeans along with 92Y51's for sudden death tolerance
- Avoid fields prone to heavy infestations of white mold and high pH soils
- Keep on your most productive fields to take advantage of its great yield potential

#### P29T98R:

- New late season replacement for 93M11 with improved yield and SCN protection
- Very solid disease tolerance including SDS, WM and BSR
- Can handle a wide variety of soil types
- Excellent defensive characteristics with great standability

#### P31T11R:

- New late season top yield potential variety
- Large soybean plant with wider canopy and tall stature
- Use P29T98R for the tougher acre and P31T11R for your most productive, less disease prone fields
- Supply is limited for 2015

TREAT 'EM  
**RIGHT**  
 AND  
 THEY'LL  
**PAY YOU BACK**  
 WHEN THEY  
 GROW UP

**Fully Loaded Protection For Fully Loaded Bins**  
 Adding Pioneer Premium Seed Treatment to your Pioneer® brand soybeans packs an extra level of protection against early-season insects and diseases to help boost your bottom line at harvest. Here's how you benefit.

**Better Emergence & Stands**

- Seed & seedling protection when you need it most.
- Strong, healthy plants help ward off early-season insect & disease issues.
- Helps growers planting earlier into cool, wet soils or high residues.

**Enhanced Plant Health & Vigor**

- Helps guard against seed & seed-borne diseases including:

Pythium

Phytophthora

Rhizoctonia

Fusarium

- Helps guard against early-season insect & nematode pressure:

Bean Leaf Beetle

Seed Corn Maggot

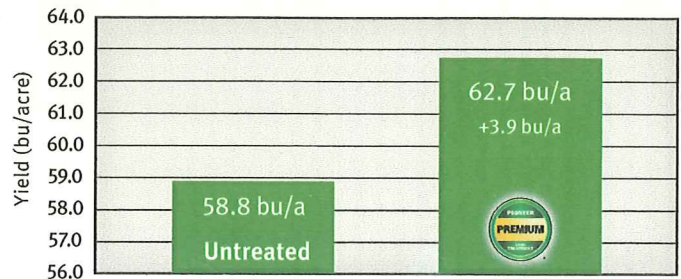

Soybean Aphid

Cyst Nematode

**Potent Payback At Harvest**

- Elite DuPont Pioneer genetics combined with Pioneer Premium Seed Treatment (PPST) help get your soybeans off to a strong, healthy start, especially in less than ideal growing environments.
- Pioneer brand soybeans treated with the PPST package outyielded untreated Pioneer brand soybeans by **nearly 4 bushels per acre** on average in 34 DuPont Pioneer research trials under pest or pathogen pressures in 2013.

**Taking SCN Performance To The Max**

- A new nematicide/insecticide component\* of our 2015 PPST offering is especially effective against soybean cyst nematode.
- In 2 years of DuPont Pioneer Research testing across 30 locations, varieties treated with the PPST package including the new nematicide/insecticide\* yielded **1.0-3.5 more bushels** per acre on average than untreated varieties from low to high SCN infestations.

See your Pioneer sales professional for help in selecting the right varieties and treatment package to make the most from your soybean acres.

Product performance is variable and subject to any number of environmental, disease and pest pressures. Individual results may vary. \*Clariva™ nematicide and Cruiser® insecticide are trademarks or registered trademarks of a Syngenta Group Company. Pioneer Premium Seed Treatment for soybeans is applied at a DuPont Pioneer production facility or by an independent sales representative of Pioneer. ## Performance of Clariva™ Nematicide Seed Treatment in Soybeans 2014

### Objective

- Research trials were conducted in 2012 and 2013 to evaluate performance of Clariva™ nematicide seed treatment (NST) for control of soybean cyst nematode (SCN).
- **Clariva nematicide (*Pasteuria nishizawae*)** contains obligate parasite spores that attach to and penetrate SCN juveniles, sporulate within the nematode, reduce SCN feeding and reproduction, and ultimately result in death of the nematode.

### Study Description

**Years:** 2012 & 2013

**Locations:** 31

**Plot Design:** Replicated small-plot research trials

**Factors:**

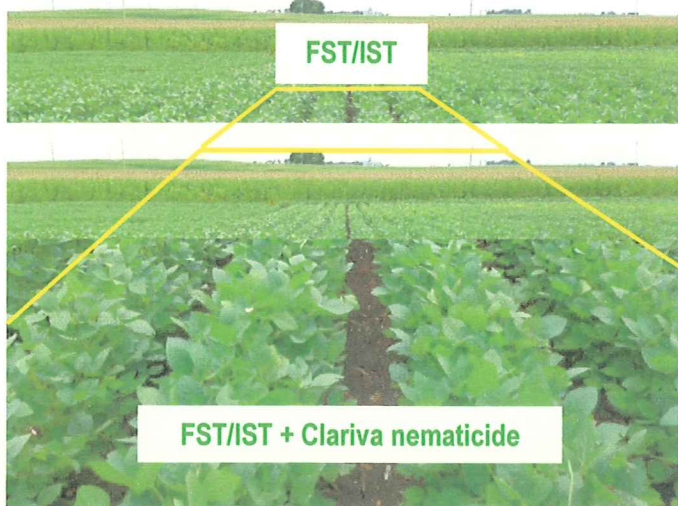

**Variety SCN Resistance:**

Two adapted Pioneer® brand soybean varieties were planted per location, one containing a source of SCN resistance (PI88788) and one without SCN resistance.

**Seed Treatment:**

1. FST/IST (fungicide/insecticide seed treatment)
2. FST/IST + Clariva nematicide

**SCN Sampling:** Research locations were sampled at soybean planting to determine SCN populations (eggs/100cc of soil).

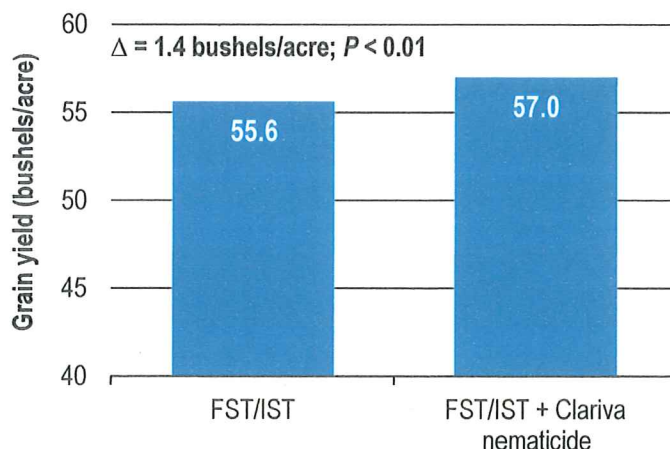

FST/IST + Clariva nematicide performance in a 2013 trial.

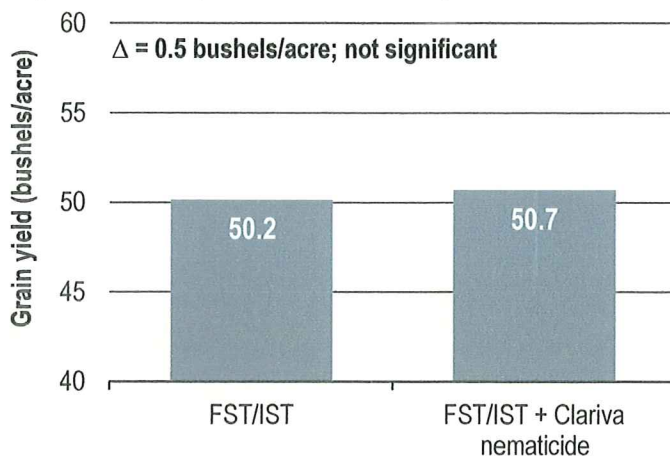

### Results

- Averaged across SCN and non-SCN environments (SCN infestations ranged from 0 to 14,926 SCN eggs/100cc), grain yield of SCN resistant varieties was 5.4 bu/acre higher than non-SCN varieties when treated with the base FST/IST seed treatment and no nematicide (Figures 1 and 2).
- Adding Clariva nematicide to the base, FST/IST significantly increased yield of SCN resistant varieties by an average of 1.4 bu/acre (2%) over the FST/IST (Figure 1), compared to non-SCN resistant varieties where the yield increase was not significant (0.5 bu/acre) with the addition of Clariva nematicide (Figure 2).

**Figure 1.** Seed treatment effect on yield of SCN resistant soybean varieties (31 locations, 2012-2013).

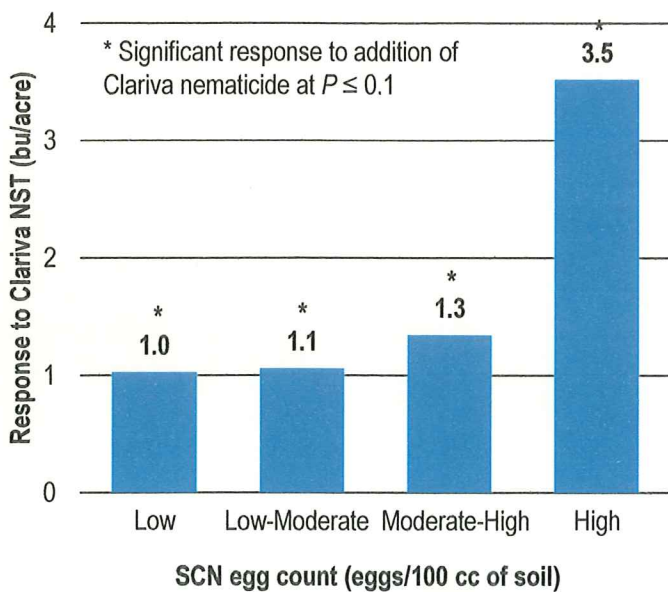

**Figure 2.** Seed treatment effect on yield of non-SCN resistant soybean varieties (26 locations, 2012-2013).

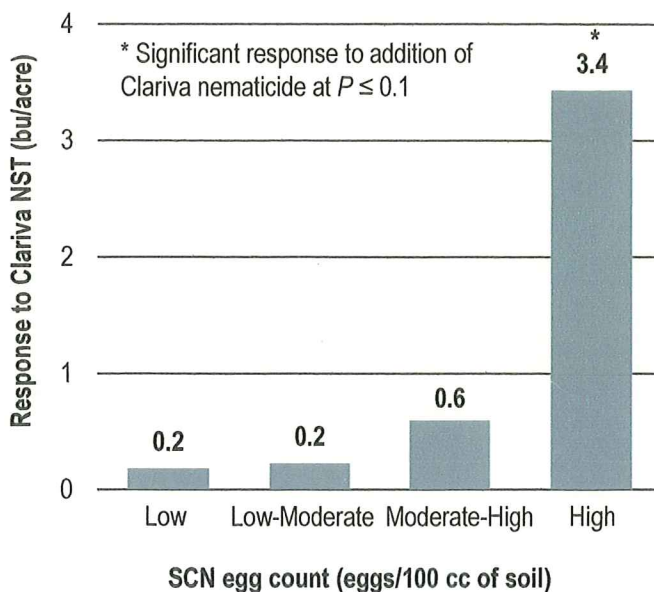

**Figure 3.** Yield response of SCN resistant soybean varieties to Clariva™ nematicide seed treatment averaged among different levels of SCN infestation in 2012 and 2013.

**Figure 4.** Yield response of non-SCN resistant soybean varieties to Clariva nematicide seed treatment averaged among different levels of SCN infestation in 2012 and 2013.

- At locations with moderate to high SCN infestations (200 to 14,926 eggs/100cc of soil), grain yield of SCN resistant varieties was increased by 1.3 bu/acre when Clariva nematicide was added to the base FST/IST treatment (Figure 3), compared to a 0.6 bu/acre yield increase with non-SCN varieties (Figure 4).
- At high levels of SCN infestation (>14,926 eggs/100 cc of soil), average grain yield increased by 3.4 and 3.5 bu/acre for non-SCN and SCN resistant varieties, respectively, when Clariva nematicide was added to the base FST/IST treatment (Figures 3 and 4).

- To maximize soybean grain yield, results of a two-year SCN trial suggest that, in known SCN environments, growers should first select an adapted soybean variety with a source of SCN resistance, then consider the addition of Clariva nematicide seed treatment, particularly if SCN infestations are moderate to high.

Pioneer Premium Seed Treatment for soybeans is applied at a DuPont Pioneer production facility or by an independent sales representative of Pioneer. Not all sales representatives offer treatment services, and costs and other charges may vary. See your Pioneer sales representative for details. Seed treatment offering exclusive to DuPont Pioneer and its affiliates.

2012-2013 data are based on average of all comparisons made in 31 locations through Dec 1, 2013. Multi-year and multi-location is a better predictor of future performance. Do not use these or any other data from a limited number of trials as a significant factor in product selection. Product responses are variable and subject to a variety of environmental, disease, and pest pressures. Individual results may vary.

Comments: Started harvesting plot on 9-19 and finished on 9-26. The P28T33R and P29T98R were hit by the September frost and appears to have affected them quite a bit. Leaves were black the morning of the frost.
